Software Requirements Specification (SRS)

Simple Task Manager System

1. Introduction

- **Purpose:** This document specifies the functional and non-functional requirements for a lightweight personal Task Management web application.
- **Scope:** The system enables individual users to register, create, organize, mark complete, and delete personal tasks.
- **Intended Audience:** Software engineering students, developers, and project evaluators.

2. Overall Description

- **Product Perspective:** Standalone, single-user-focused task management system accessible via modern web browsers.
- **User Characteristics:** General users who want a simple, uncluttered tool to track daily to-do items.
- **Operating Environment:** Modern web browsers (Chrome, Firefox, Edge, Safari).
- **Assumptions & Dependencies:** Users require an active internet connection to synchronize tasks with the database.

3. Functional Requirements (FR)

- **FR-01 (User Authentication):** The system shall allow users to log in with an email and password.
- **FR-02 (Create Task):** The system shall allow users to create a new task by specifying a title and optional description.
- **FR-03 (Set Due Date):** The system shall allow users to optionally assign a due date when creating or editing a task.
- **FR-04 (View Tasks):** The system shall display an organized list of all active and completed tasks.
- **FR-05 (Update Status):** The system shall allow users to toggle a task status between "Pending" and "Completed".
- **FR-06 (Delete Task):** The system shall allow users to permanently delete a selected task.

4. Non-Functional Requirements (NFR)

- **Usability:** The interface must be minimal, responsive, and allow task creation in under 3 clicks.
- **Performance:** The task list must render within 1 second of loading.
- **Security:** User passwords must be hashed before storage; users can only view and manage their own tasks.
- **Availability:** The system should achieve 99% uptime.
